**Subject:** ST012 Update

**Importance:** High

BCT members

A quick update for ST012. As discussed in the BCT conference call on December 17th 2015, the SEE operations team has been injecting steam to prepare the site for a unified depressurization cycle (all three zones simultaneously). Current operational data indicate that TMP and MPE well temperatures will meet the required levels in the next three to four days. Thus, the onset of the unified depressurization will commence next week as previously scheduled. The depressurization is anticipate to last for approximately two weeks subject to operational data collected during the depressurization. The weekly operations report will be issued shortly.

Happy holidays to all

D.R. Smallbeck  
Principal Program Manager  
Construction Remediation
